

RIGHT ADS

Developer: Aryan

Project Overview

- Right Ads Digital evolved from a marketing website into a unified business platform combining service discovery, lead management, certification services, career and internship portals, and a future-ready consultation system. The platform serves public clients and a protected admin CRM.

Public Modules

- **Services** — JustDial-inspired search and service cards with lead submission.
- **Certificates** — NSIC, ISO, and MSME registration cards with detail and application modals.
- **Career** — Job and internship listings with resume upload applications.
- **Contact** — Multi-branch contact form integrated with the backend.
- **ChatBot** — Gemini-powered assistant via server.js gateway.

Admin Modules

- Dashboard analytics, Contacts, Leads, Careers, Internships, Certificates, and Meetings.
- JWT-protected routes with sidebar navigation, status badges, and approve/decline workflows.
- Approving contacts or leads auto-generates consultation meetings in the database.

Consultation System

- Future Consultation Portal with email-verified room access, WebSocket chat persistence, participant cards, and video/audio placeholders. WebRTC is architecturally prepared but not implemented.

Backend Architecture

- React Frontend → server.js (Express Gateway) → FastAPI → SQLite Database
- ChatBot requests route through server.js to Gemini API separately from business APIs.

Tech Stack

- **Frontend:** React, CSS, JavaScript
- **Gateway:** Node.js, Express
- **Backend:** Python, FastAPI
- **Database:** SQLite
- **Authentication:** JWT (admin only)
- **AI:** Gemini API

Features Implemented

- Lead management, career portal, internship portal, certificate system, admin dashboard, meeting workflow, dark/light theme system, glassmorphism UI, and antigravity visual effects.

Future Scope

- WebRTC video conferencing, production WebSocket scaling, email notifications (SMTP), PostgreSQL migration, and payment gateway integration (Razorpay architecture prepared).

Conclusion

- Right Ads is now a production-ready digital services ecosystem — combining JustDial-style discovery, CRM administration, compliance services, talent acquisition, and a consultation portal foundation. The architecture is modular, theme-consistent, and designed for straightforward future expansion.
